## **Assignment 1**

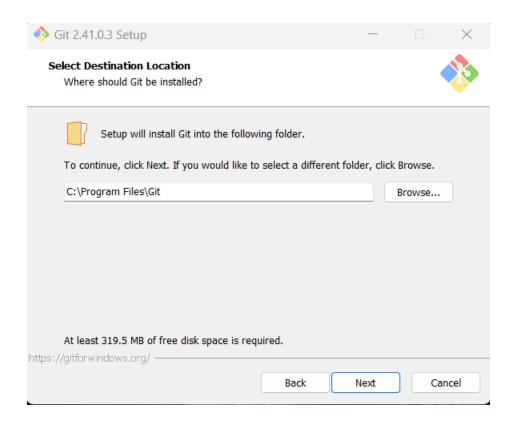

- 1. Go to browser and type as (<a href="https://git-scm.com/downloads">https://git-scm.com/downloads</a>)
- 2. Click the download link for Windows and allow the download to complete.

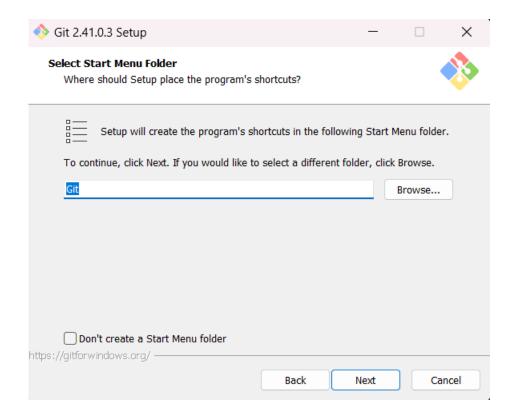

3. Review the GNU and when you are ready to install click next.

4. The installer will ask you for an installation location. Leave the default, click next

5. Leave the defaults unless you have a specific need to change them and click Next.

## Choosing the default editor used by Git

Which editor would you like Git to use?

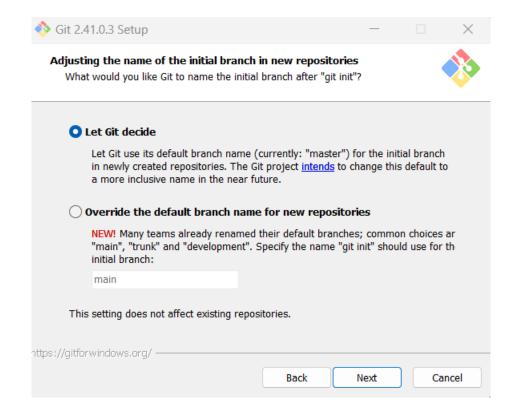

Use Vim (the ubiquitous text editor) as Git's default editor

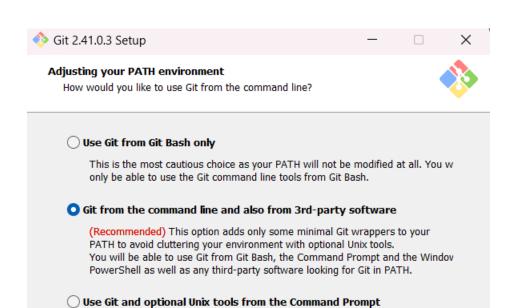

The Vim editor, while powerful, can be hard to use. Its user interface is unintuitive and its key bindings are awkward.

Note: Vim is the default editor of Git for Windows only for historical reasons, an it is highly recommended to switch to a modern GUI editor instead.

Note: This will leave the 'core.editor' option unset, which will make Git fall back to the 'EDITOR' environment variable. The default editor is Vim - but you may set it to some other editor of your choice.

Both Git and the optional Unix tools will be added to your PATH.

Warning: This will override Windows tools like "find" and "sort". Only

Git will use the default console window of Windows ("cmd.exe"), which works v with Win32 console programs such as interactive Python or node.js, but has a very limited default scroll-back, needs to be configured to use a Unicode font in order to display non-ASCII characters correctly, and prior to Windows 10 its window was not freely resizable and it only allowed rectangular text selections.
